PANEL BLIND RIVETS

Dome Head - Most popular for industrial applications. The low profile head diameter is twice the rivet body diameter, providing adequate bearing surface for nearly all applications.

Large Flange - Provides greater bearing surface for fastening soft and brittle facing materials such as plywood and plastics including, vinyl, etc.

Countersunk - for applications where a flush appearance is required.

FLUSH MOUNT BLIND NUT FASTENERS HOW IT WORKS

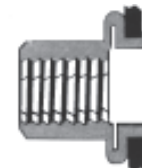

The blind nut, held securely by the tool, is placed into a prepared hole. Upon the tool's actuation, the threaded portion is pulled until the fastener's wall collapse radially outward, clinching it tight against the sheet. The tool is withdrawn, leaving the blind nut ready to receive a bolt or screw. This complete operation takes only a few seconds and can be performed by anyone.

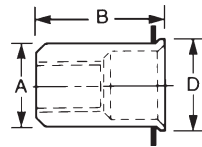

1.
INSERT BLIND NUT
INTO PREPARED
HOLE.

2.
ENGAGE THE TOOL.

3.
BLIND NUT
INSTALLED WITH STANDARD
HEAD CONFIGURATION.

FLANGED BLIND NUT

FLANGED BLIND NUT

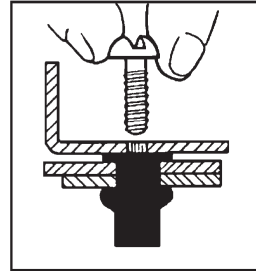

Flanged blind nuts work the same as flush mount blind nuts, However because of their large diameter heads they offer Extra strength on softer materials.

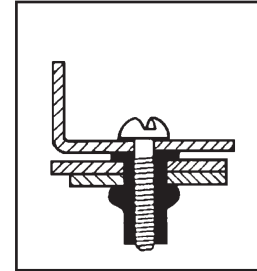

1. Drill hole to correct diameter, thread fastener onto tool mandrel and insert into hole.

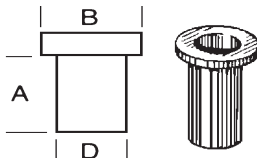

2. Actuate tool to properly set fastener into material.

3. Complete your fastening operation with a bolt or screw with the proper thread.

4. The positive riveting action of blind nuts provide consistent firm fastening. Push-out & shake-loose are virtually eliminated.
