

BLACK JACK TIRE REPAIR KIT

Black Jack tire plugs seal the injury completely through the tire, keeping out moisture & contaminants that could cause the cords to rust and potential tire separation.

Black Jack tire plugs conform to the shape of the injury, unlike hard-cured repairs that force the injury to conform to the shape of the plug. Because these tire plugs conform to the size and shape of the injury and eliminates stress to the belts and preserve the tire body while completely sealing out moisture and dirt.

Black Jack tire plugs are manufactured for the professional installer, and are made using twelve strands of high-tensile fiber (many competitors use as few as seven strands). Each strand of fiber is individually impregnated with a live-rubber compound (butyl rubber). This compound is laboratory-developed using carbon black, which strengthens the butyl-rubber and matches the color of the tire.
